

Impact Toughness Testing

As all test samples were taken from plate, a tailor made unnotched impact sample was designed with dimension **0.110 x 0.185 x 1.5 inch** (non standard)

- The toughness of ELMAX at 61 HRC is better than any competitor's stainless blade steel even at 57 HRC.
- This is typical of 3rd generation Bohler-Uddeholm powder metallurgical steels.
